Professional Summary

Data Engineer & Analyst with 2+ years of experience building Azure-based ETL/ELT pipelines, data quality frameworks, and Power BI dashboards. Skilled in Python, SQL, Azure Synapse, ADLS, ADF, Power BI, DAX, and data reconciliation, with experience delivering production analytics solutions for FMCG and e-commerce domains.

Skills

Programming & Scripting: Python (NumPy, Pandas, Matplotlib), SQL, DAX, C++, KQL
Data Engineering: ETL/ELT Pipelines, Data Modeling, Azure Data Factory, Azure Synapse, Microsoft Fabric, Data Reconciliation, Data Quality Validation, Schema Validation, Snowflake, BigQuery
Data Visualization & BI: Power BI, Tableau, GA4, Google Tag Manager (GTM), Power Query
Databases & Storage: ADLS Gen2, Snowflake, BigQuery, MySQL
Tools & Technologies: Azure DevOps, CI/CD, Azure Functions, Azure Service Bus, Azure Container Applications, Git, SharePoint, Salesforce, SOQL, JSON Configuration Management, Excel

Experience

Mindstix Software Labs Pvt Ltd.

June 2024 – Present

Member Of Technical Staff

Pune, Maharashtra

Project: Data Quality Reconciliation & Analytics Platform for FMCG Enterprise

- Built an Azure-based Data Quality & Reconciliation Framework validating Oracle/Peloton data against Azure Data Lake/Synapse across 15+ production entities.
- Configured 48 production JSON files covering reconciliation, full reload, intrinsic checks, and SNM validation workflows.
- Implemented 150+ data quality checks, including 89 reconciliation/baseline checks, 50 intrinsic checks, and 14 SNM checks.
- Developed Power BI dashboards using DAX and Power Query to monitor 95% data health, entity-level accuracy, pass/fail status, and injected record counts.
- Improved reporting reliability through schema validation, data cleanup, baseline hashing, and 650+ source-to-target column mappings.
- Collaborated with clients, third-party vendors, data engineering, QA, and DevOps teams to resolve data issues and support production releases.
- Used Azure DevOps for CI/CD deployments, config releases, pipeline execution, documentation, and version control across dev, test, and prod.

Project: Azure Data Platform for a Luxury E-commerce Retailer

- Designed and developed a scalable Azure-based data platform using Medallion architecture Raw, Bronze, Silver, Gold for a global e-commerce client.
- Built ADF ETL pipelines with SCD Type 1 2 handling, idempotent loads, schema validation, and configurable external rules.
- Integrated MySQL purchase data, SharePoint forecasting data, and Salesforce CRM data using SOQL for sales, inventory, and demand insights.
- Ingested GA4, GTM, and BigQuery web analytics data to support marketing performance and customer behavior reporting.
- Developed Power BI dashboards for sales, inventory, purchases, finance, and commission KPIs using DAX and Power Query.
- Used Microsoft Fabric, ADLS Gen2, Power BI, Excel, and PowerPoint to deliver data models, reports, and business-ready insights.

Hexagon Geosystems

Jan. 2024 – May 2024

Intern

Gurugram, Delhi

- Worked in Geospatial analysis and data management using C# and .NET. Employing Python for process automation.
- Worked on solutions for various mapping jobs, with a focus on GIS development, and utilizing vector mapping tools such as Bentley MicroStation.

Education

Vishwakarma Institute Of Technology

Aug. 2020 – June 2024

BTech in Artificial Intelligence & Data Science CGPA:9.21

Pune, Maharashtra
